

Python 版本 3.6.12

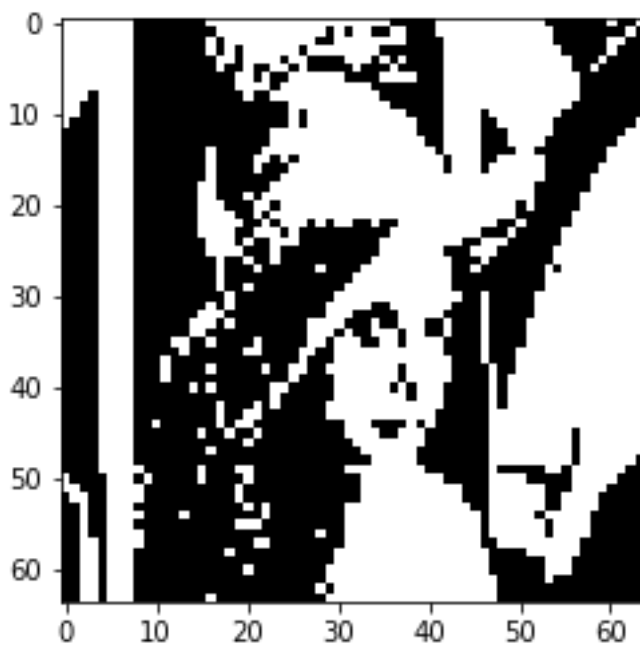

使用套件 cv2, numpy, matplotlib

First, read the bmp file

Write a program which does thinning on a downsampled image (lena.bmp).

Step1: Binarize the benchmark image lena, then using 8x8 blocks as a unit, take the topmost-left pixel as the downsampled data.

Step2: Creat marked image : Count the Yokoi connectivity number on a downsampled lena using 4-connected, and then use the pair relation operator

Formula:

Yokoi connectivity:

- for 4-connectivity

$$h(b, c, d, e) = \begin{cases} q & \text{if } b = c \text{ and } (d \neq b \vee e \neq b) \\ r & \text{if } b = c \text{ and } (d = b \wedge e = b) \\ s & \text{if } b \neq c \end{cases} \quad f(a_1, a_2, a_3, a_4) = \begin{cases} 5 & \text{if } a_1 = a_2 = a_3 = a_4 = r \\ n & \text{where } n = \text{numberof}\{a_k | a_k = q\}, \text{otherwise} \end{cases}$$

Pair Relationship Operator:

$$h(a, i) = \begin{cases} 1 & \text{if } a = i \\ 0 & \text{otherwise} \end{cases} \quad \text{output} = \begin{cases} q & \text{if } \sum_{n=1}^4 h(x_n, i) < 1 \vee x_0 \neq b \\ p & \text{if } \sum_{n=1}^4 h(x_n, i) \geq 1 \wedge x_0 = b \end{cases}$$

Step3: Connected Shrink Operator

Formula:

for 4-connectivity

$$h(b, c, d, e) = \begin{cases} 1 & \text{if } b = c \wedge (b \neq d \vee b \neq e) \\ 0 & \text{otherwise} \end{cases}$$

$$\text{output} = f(a_1, a_2, a_3, a_4, x_0) = \begin{cases} g & \text{if exactly one of } a_1, a_2, a_3, a_4 = 1 \\ x_0 & \text{otherwise} \end{cases}$$

Step4: Compare the shrink result with marked image

Step5: repeat Step2~4 7 times

Compare original downsample and the Result:
